September 2007 Issue

Welcome back to school ! I hope you all had a great summer. Here is some new information I've been assembling and would like to share with you.

Computer Service and Support

How about a great handout for your students with all the most common cable connections? Visit the black box web site and look at the technical document for connectors.

http://www.blackbox.com/Tech_Support/Technical-documents/connector-guide.aspx

If the link fails, simply do a "Google" using the key words "**Black Box connector guide**"

After location the guide, simply right-click on the cable connection picture and select" copy." Then paste it into Microsoft Paint or another paint program. That's all there is to it. You're ready. You may want to email Black Box and ask for copyright permission but for a simple class handout, there shouldn't be any copyright problems.

DDR, DDR2 or DDR3

DDR3 was finally released this past summer so check out the short summary about DDR, DDR2 and DDR3 available at our website.

Just click and link to access the DDR1,DDR2,DDR3 PDF file from the PDF File list at www.RMRoberts.com/FTP_files. Use it in your computer classes.

Free PC Diagnostic Tool

How about a FREE diagnostic utility that works really great? No I don't get a dime for the endorsement. Click on the link below.

http://www.cpuid.com/

And checkout the CPU Z and other programs available such as PC Wizard. The site contains some of the very best free utilities I have ever encountered.

Network Fundamentals

The third part of Networking Fundamentals study guide and practice test is now available at our FPT download link www.RMRoberts.com/FTP_files

Gone All Summer?

If you have been gone all summer, check out the sample Power Point for Chapter 1 of <u>Networking Fundamentals</u>, by Richard Roberts, located in the www.RMRoberts.com/FTP_files

How about a sample CompTIA Essentials practice test. It's just like the real thing.

Click on the link below.

Essentials Practice Test.

The next news letter will present a link to a short handout about all the latest Bluetooth and Wi-Fi technology as well as wireless USB, 27 MHz devices and 2.4 MHz devices. Lots of good stuff that you may see on the latest CompTIA exam.

Please feel free to pass a copy of this newsletter along to other teachers.
